Organizations are ensuring GDPR compliance and global document security with the support of Connecting Software's replicator solution when migrating to Microsoft services

Connecting Software developed a solution to ensure GDPR compliance and document integrity. From private organizations to public sector entities, CB Dynamics 365 to SharePoint Permissions Replicator is supporting the optimization of business processes and document storage by automatically replicating privileges from Dynamics 365 to SharePoint. Supported by all versions of Dynamics 365 and SharePoint.

Vienna, Austria, October 15th, 2018 – Organizations across sectors using SharePoint to manage Dynamics 365 documents can leverage the **CB Dynamics 365 to SharePoint Permissions Replicator** to optimize their business processes and document storage. Moreover, they can build on the secure permissions structure – automatically updated whenever changes are made – to extend their Dynamics 365 and SharePoint environments, thereby creating a collaborative asset for managing important documents.

Connecting Software's **CB Dynamics 365 to SharePoint Permissions Replicator** is supporting more organizations and public sector entities to move to Microsoft Azure, Microsoft Dynamics 365, and Microsoft Office 365. This solution automatically replicates Dynamics 365 privileges to SharePoint permissions. Furthermore, it ensures document integrity and GDPR compliance while supporting all cloud, hybrid, and on-premises deployments, as well as all versions of Dynamics 365 and SharePoint.

"*It's one of those software products which you don't have to think about once you set them up. I don't have to check in on it, since I know it is working. It does what it says it will do. There are other software companies that say a lot but don't do what they say they will do,*" states Mike Freeman, VP of Information Technology at Sabert.

This solution is running in big enterprise settings – at the government level, for example, in Canada's House of Commons, and elsewhere on multiple continents. Connecting Software offers a free 30-day trial with flexible deployment options, including on its own Azure-built Software-as-a-Service portal. With just a few clicks, customers can move their entire deployment to Azure. It's a Microsoft co-sell ready

solution, making the integration of Dynamics 365 and SharePoint more robust and secure.

As Thomas Berrndorfer, CEO of Connecting Software, confirms, "*Our add-on solutions enable organizations across sectors to flexibly extend and scale their Microsoft Dynamics 365 and Microsoft Office 365 environments, in turn creating a secure, collaborative, integrated asset they can build on*."

About Connecting Software

Connecting Software offers the powerful software integration platform Connect Bridge, as well as SaaS and on-premises products. The company provides integration, synchronization, and productivity solutions to more than 60 partners and hundreds of customers on five continents across the public, private, and third sectors.
